Homework #2

Points: 10

Deadlines:
Groups 1, 2, 3, and **4: 1 November** 2026, 23:59
Group 5: **3 November** 2026, 23:59

The main aim of this homework is to assess your capabilities in using **JavaScript** to add some logic to **HTML** documents and make them **dynamic**.
Note: you cannot use Bootstrap in the homework.

In your previous homework, you created a page that contains various posts (Figure 1).

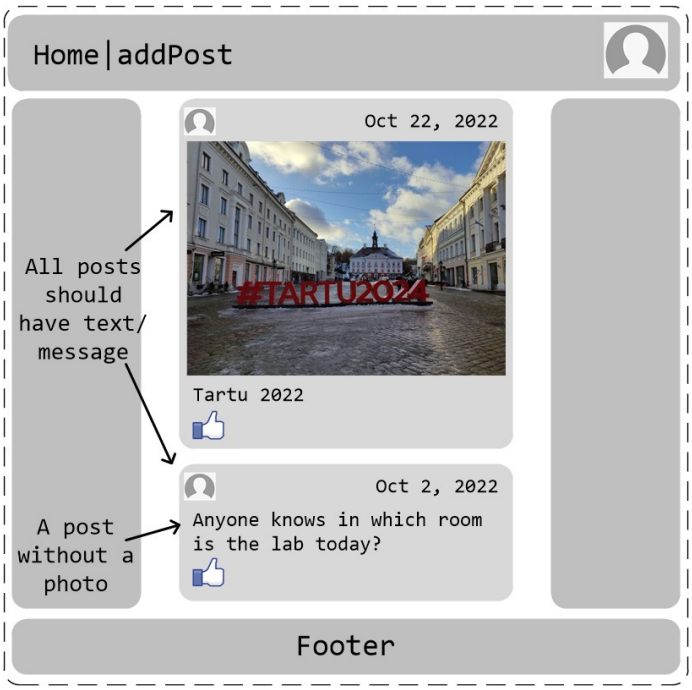

Figure 1. index.html

In this homework, you'll try to make this page more dynamic. Instead of "**hard coding**" these posts into the webpage, you will **dynamically** create them.

Tasks

1. Create a JSON file that contains at least 10 objects, which describe different posts. Pay special attention to the literals (creation time, author name, etc.) that you'll include in your objects. **(1 point)**
   Hint: read **point 6,** otherwise, you may need to modify your JSON file when you reach it.
2. Try to find an online free website for validating the correctness of the JSON file you have just created, and use it to validate the JSON objects. **(1 point)**
3. Try to find an online free website (**endpoint**) that allows you to store your JSON file online (**endpoint**). Many websites can host your JSON file and provide you with a Uniform Resource Identifier (URI), which you can use to retrieve such information relying on Fetch API. **(1 point)**
4. Write code that can retrieve/fetch the posts' information from the **endpoint** (URI) you created in Task 3, and use such information to dynamically create the webpage shown in Figure 1. **(2 points)**
5. Integrate the JSON file into your project, and modify the Fetch code to retrieve/fetch the JSON objects information from it. **(1 point). Note:** do not delete the code related to fetching the data from the online source (task 4); just comment it out.
6. You know that you can store only "text" in JSON files; try to find a solution for any photo that your posts include. **(1 point)**
7. Extend the webpage by creating a dropdown menu that shows a user name, email, and logout (Figure 2 and Figure 3). This list opens and then closes by clicking **on** the personal photo. **(1 point)**
8. The overall styling of the page **(1 point)**
9. Do not forget **to push all your changes to your repository.**
   - At least one "commit" from every team member.
10. Deploy your project as a **GitHub Pages** site (https://docs.github.com/en/pages/getting-started-with-github-pages/creating-a-github-pages-site) **(1 point)**

Rules for homework submission and discussion

1. Through Moodle, submit a text file (*.txt) that contains your **Team number**, Name(s), and a **valid and accessible link to the repository** that contains your **Project**, and a link to the **deployed project** (GitHub page). You can make your repo **private,** but you need to add your lab teacher and me as collaborators. Still, you need to submit the links to it through Moodle. **Note:** If the **link** to your **repository** is **not accessible** or **valid** for any reason, you might not be allowed to discuss your homework, or at least you will lose **5 points**.
2. After submission, only one person from each team is required to share the links to your **project** and the **deployed one** (GitHub page) with your **lab teacher**. You can do that by sending him/her a **direct message** in **Slack, including your team number and the names of the team members, along with the links in the message.**
3. Your lab teacher will share a link to an Excel sheet containing 10-minute discussion slots. Each team must book one of the available slots, join the discussion at the scheduled time, and be prepared to present their work. Make sure your project is up and running before the discussion begins.
4. **All team members should attend the discussion** of their homework; you **will not be allowed to discuss** if your team **is not complete**. If you already know that your team will not be complete because one or more of the members cannot attend due to another commitment, **contact me** as soon as possible, and we can find a solution.
5. You have to submit your homework by the defined deadline, and **you will lose 0.5 point for each hour of delay.**

AI-Assisted Coding: Students may use AI-assisted coding tools when completing the homework. However, **you are fully responsible for the code you submit**. You should understand how your code works and be able to explain and answer questions about **any part of your submitted code**.
